ABOUT ME

I am a Computer Science student from the American University of Phnom Penh. I came from a small village located in Kampong Cham province. However, I moved to Phnom Penh City since I was in grade 6. By living alone in the city I have gained a lot of life experiences.

WORK EXPERIENCE

2022

Football Match Organizer

In the past, I served as an organizer for a football event, taking on the responsibility of coordinating all aspects, from finding teams and sponsors to securing a suitable playing field. Through my dedicated efforts, the event proved to be a great success. This experience not only honed my organizational and project management skills but also allowed me to foster teamwork and build meaningful connections within the football community. I am immensely grateful for the valuable lessons and sense of fulfillment this role brought into my life, motivating me to embrace new challenges and continue making positive contributions in various endeavors.

2019

Video Editor

During my high school days, I took on the role of a video editor for our school. When it came to promoting school fees or showcasing the school's achievements, I was entrusted with the task of creating captivating videos. Not only did this allow me to showcase my video editing abilities, but it also gave me the opportunity to collaborate with students from other classes. Through these experiences, I honed my communication skills and learned how to work effectively as part of a team. These valuable experiences have stayed with me and continue to serve me well in various aspects of my life.

2020

English Teacher

During the COVID-19 pandemic, I took on a fulfilling role as an English teacher for level 4 students. My motivation for this endeavor was not driven by financial gain; rather, I simply wanted to contribute to society by helping others improve their English language skills, which are crucial for their future career prospects.

2023

Front-End Project

I learned Front-end from Udemy. I have done a project called Freecode which people have access to see the videos that I have taught on YouTube about C programming. However, I am still working on that project. On top of that, I'm currently learning the back-end.
